

Trendlog

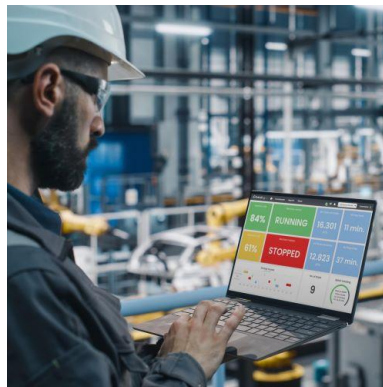

The simple way of optimizing a production

*Trendlog is your flexible solution for production monitoring, analysis and maintenance planning.
Trendlog lets you increase production efficiency and create more sustainable practices*

- "Streamline the data from across your production"
- *The challenge:* Manufacturers often experience great pressure to contain costs to increase the profitability of production. This is a challenge in many places, as they have to balance keeping costs down while investing in technology and equipment to increase efficiency and quality in production. There is an increasing focus on sustainability and manufacturing companies are therefore facing pressure to reduce their impact on the environment. This can be a challenge as it may require investment in new technology and changes in production processes.
- *The "solution":* One of the most promising solutions for manufacturing companies is the conversion to digital. By harnessing the power of data, manufacturing companies can improve their processes, reduce costs and increase efficiency. Digitalization can help manufacturing companies improve their accuracy in production planning, forecasting and tracking production in real-time. This can lead to a reduction in waste and downtime and an increase in production speed and quality.

The products:

- Realtime Production & OEE - *PLC, runtime signal, production count, downtime, stop causes etc.*
 - Energy & Consumption Tracking - *Temperature, Humidity, Heat, Water*
 - Maintenance Planner
- USP: Trendlog is ONE system for both management and personnel. Data can give you a unique overview, that can help reduce downtime, let you stay ahead of maintenance issues, and supply a more efficient production.
